Operational Excellence

Description

- * Contribute to ongoing operational functionality of existing platform.
- * Develop improvements for the platform and new functionality.
- * Knowledge share and communicate technical experience across the team.

Comments

Luke has once again proven that he understands the deep technical knowledge of keeping a platform as complex as the DDS architecture running efficiently. He is not only willing, but excited to pick up tasks that are required of the team to run this platform, a drive I rarely see in other engineers through my history of working in the industry.

I'd like to highlight his pivotal role in our migration story to HCP. He has been key to decommissioning, refactoring, and updating our legacy systems into the new world. Most impressive of this is his role in migrating 150+ customers from our legacy KaaS Alpha system. This was a massive load involving customer communication, deep custom scripting to migrate, inter-team communication for compatibility issues, and collaboration to the level which many engineers have not been challenged with before.

Business Goals

- * Improve on customer service engagement and encourage/support team members to do the same
- * Contribute and be an active member of the team's open and inclusive software engineering culture.
- * Seek opportunities to share information and knowledge inside/outside of EEPS organization
- * Increase visibility and influence outside of EEPS organization

Comments

Luke is consistently praised by other members of the team in regards to his friendly, open, and approachable demeanor. He has some of the most specialized knowledge on the team in regards to the inner workings of our existing systems and is able to communicate/collaborate with other engineers to share this. Luke is a great mentor those on the team.

He also shows great accountability to our customers, frequently taking on burdens not expected of him to ensure our customers are provided an excellent experience.

Product Management

Description

- * Exhibit accountability of technical aspects of the team you contribute to.

Comments

Accountability is something I believe Luke excels in. He shows he greatly cares not only about the quality of his work, but the greater platform outside him. I know there is some untapped potential in this space from my history of working with him. I believe he could further highlight his knack for higher-level product responsibilities given the more opportunities.

doesn't fit into traditional archetypes. This is exactly the type of talent an immense platform engineering team needs and I am grateful for his presence on the team.
