#### Operational Excellence

#### Description

To be efficient, precise and successful in tasks assigned and to provide value to the team and the company as a whole.

#### Comments

This year was one of many accomplishments. I gained a lot of confidence through experience which allowed me to work through assigned tasks in a more independent, but efficient manner. Some of the accomplishments I am most proud of are the handling of the quarterly AWS secrets rotation, the consistent operations and maintenance or Azure Kafka, and playing a big role in many of the tooling migrations that the team had to handle this year.

Taking over the AWS secrets rotation has been very important to me, as it has a large impact on our team as a whole. At the same time, if it is done correctly, it should have little impact on the team. If all secrets are rotated and updated in their necessary locations the team should seamlessly move along with very little recognition of the change. I believe that throughout this year, I have done an efficient job at tracking, managing and executing the secrets rotations and the many updates that go along with this process. We have constantly changing environments and uses of these secrets, so keeping track of all of them can be a large task at times.

With the help of other team members, the maintenance of Azure Kafka has been another big part of this past year. Though we are moving away from Azure, it has been of utmost importance that the teams still using it have a functional and stable environment to use until they are able to move to GCP. I believe I have become a SME when it comes to our Azure Kafka offering from maintenance of clusters to customer communication. I have conducted many patching operations on our customer clusters as well as decommissioning 10+ clusters in order to reduce our footprint in Azure in favor of GCP. I created a master script which is used for decommissioning our Azure clusters along with writing thorough documentation to go along with it. Most recently, I have been at the forefront of migrating all our Azure infrastructure repositories to GitHub Enterprise Cloud so we can be in compliance while continuing to provide a stabile platform for our customers. This migration included the building of a complex GitHub Actions workflow which replaced Atlantis along with the rigorous testing that accompanied this new flow to ensure stability through the migration.

## Business Goals

As a team, we have been challenged this year with the migration of many of our common tools, and I am happy to have played a role in almost every one. First was Openshift to HCC K8s where I migrated 3 agents as well as providing support to various team members who were migrating other agents and workloads off of Openshift. With this came the need for us to migrate Grafana instances. Along with various dashboards, I was tasked with and completed the migration of all the Azure Kafka Alerting Rules hosted in Grafana. This was important as it is our main source of truth for the health of Azure Kafka clusters. Finally came the migration from on-prem GitHub to GitHub Enterprise Cloud. I have migrated 20+ repositories to GHEC including all of the Azure infrastructure repos along with their CICD pipelines. I also migrated the hcc-dp-secrets repo and updated all references in our documentation and other repositories to point to the new repository (about 50 references over about 25 PRs). this is a high visibility repository and heavily impacts the AWS secrets rotation as well.

Another notable accomplishment was the design and implementation of P5 ServiceNow tickets being created for teams with expiring certs. This was done in an effort to mitigate the amount of expired certificate issues we have to handle and I believe has noticeably decreased this traffic.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                      |   |   |   |   |   |     |

| Take responsibility for important team assets and be the main point of contact for those sections of work.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                      |   |   |   |   |   |     |
| Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                      |   |   |   |   |   |     |
| While I may not have proper "product ownership", over the past year I have taken responsibility for a number of different important assets to our team. The most notable being the quarterly AWS secrets rotation, but I also am the main source of contact for our Grafana backup functionality as well as the lag alert agent that will be sunset along with Azure.                                                                                                                                                                                         |                                      |   |   |   |   |   |     |
| The AWS secrets rotation and my contributions related to it are outlined more deeply in the section above, but I have been taking pride in making sure this goes as smoothly as possible for the entire team while maintaining compliance with EIS.                                                                                                                                                                                                                                                                                                           |                                      |   |   |   |   |   |     |
| Having our Grafana instances backed up is very important, especially because it houses all our alert metrics. I have maintained, migrated it to HCC K8s and added/removed Grafana instances from the backup as we migrated Grafana instances (Openshift migration). Having this backup ensures we always have a fallback option if anything should go terribly wrong with Grafana.                                                                                                                                                                            |                                      |   |   |   |   |   |     |
| The lag alert agent is something that was handed off to our team at the end of last year. It is an agent that is used to generate lag alerts for consumers of different Azure Kafka clusters. Along with ensuring the stability of the agent, I also created a failure check. The lag alert failure check is deployed in HCC K8s on a daily schedule. It obtains any failed lag alert resources and sends an email out to a list of people to inform of the failures. This functionality is in a KLO state and will die alongside Azure when that time comes. |                                      |   |   |   |   |   |     |
| I am proud of the responsibility I have taken over these various assets as they are important to our teams success. I look forward to taking on more responsibility when needed in this next year and will push myself to have the confidence to do so.                                                                                                                                                                                                                                                                                                       |                                      |   |   |   |   |   |     |

|         |                                      |   |   |   |   |   |     |

## Business Goals

### Description

Contribute to a fulfilling, energizing team culture of impactful hard working individuals who work together toward the common goal of helping each other and providing valuable products to our customers.

### Comments

The culture of our team is extremely important. Ever since I joined this team I have noticed the friendly, collaborative nature that this team provides. It is very important that the members of the team can be relaxed and comfortable to ensure maximum productivity. Everyone on the team cares about our product and believe genuinely wants to continue improving the experience for all our customers. These details and many more are what I have been striving to embody and carry on throughout my time here.

The most noticeable "contribution" I think I have made to our culture this year is the mentorship of Chad when he joined the team back in May. Although he came from another team internal to Optum, I thought it was very important to take those traits and values that I feel everyday on this team and make him feel those too. It was also important to me to get Chad ramped up and on-boarded as fast as possible so he could get onto meaningful and fulfilling work. A culture of collaboration, friendship and respect are all things that I try to embody daily.

I think as a team we continue to grow stronger, even through all the organizational changes. That says a lot about this group of people and how we all work together!

## Evaluation Summary

- 1
- 2
- 3
- 4
- 5

Upon reflection of my accomplishments this year, I strongly believe that I met my business goals and even exceeded some of them this year. I have continued to grow as an engineer while accomplishing many impactful tasks. I feel that my need for guidance has decreased greatly as this year has gone on. I feel confident in making development decisions and my ability to execute on those decisions. I feel a strong sense of culture on this team which makes collaboration fun and all around effective. I'm excited for the year ahead and to continue growing as an individual to help this team!

## Strengths

### Technical Abilities

I believe I have built a strong foundation of technical problem solving and execution. I have learned so much in this last year about different technical tools and about our whole stack in general. I believe I have a good understanding of our product offerings and our teams mission. While I feel this is a strength of mine, I also recognize there is always room to grow and continue bettering myself in all aspects!

---

## Area For Improvement

### Personal Skills/Networking

I would like to be better at expanding my network and general personal relationship skills. I would like to prioritize getting to know more individuals and learning their perspectives on work and life. I want to ask more meaningful questions as we have a wealth of knowledge on our team and at this company that I can definitely tap into more.
